MEET THE NEW (AND PROVEN) BRUIN

After conquering millions of acres across Europe, the Bruin Sprayer has been reimagined for farmers and custom applicators in North America.

BRUIN by **ET** SPRAYERS

THE BEST IN THE WORLD, RE-ENGINEERED IN AMERICA

The preferred self-propelled sprayer of the largest farming operations across Europe has been reimagined for North American farmers and custom applicators.

Bruin Sprayers combine proven spray application technology with new performance features and specifications specially tailored for the needs of farmers here in North America.

A STEADY BOOM

The strength, stability and flexibility of the boom package are unmatched by other hydrostatic sprayers. Don't believe us? See for yourself at: BruinSprayers.com.

CLEAR ANY CROW (OR A GROWN MAN)

The HS1100 sprayer adjusts automatically from 60 to 70 inches — making it the tallest rear boom sprayer available in North America.

WIDE REACH

The 120 foot boom on the HS1100 provides max reach to spray more acres per hour.

FIVE-YEAR POWERTRAIN WARRANTY

Equipment Technologies warrants every new Bruin Sprayer to be free from defects in materials and workmanship for a period of five years or 2,000 hours, whichever occurs first. The first two years of warranty includes bumper-to-bumper coverage (some exclusions apply), with the following three years covering parts only.

BUILT LIKE A BEAR

Heavy-duty doesn't do a Bruin justice. A stout, powerful build delivers longevity and optimal performance in ALL conditions.

A RELAXING RIDE

Active pneumatic suspension (front and rear), hydraulic shocks and an oscillating rear axle deliver a smooth, responsive ride.

NARROW TRANSPORT

A narrow axle configuration (79 inches to 105 inches) on the HS700 allows for easy transport between fields.

WIRELESS JOYSTICK

Step out of the cab with our simple-to-operate wireless joystick. This high-tech component interacts with the sprayer to make boom adjustments and nozzle checks a one-person job.

MORE POWER CONTROL OPTIONS

The operator can choose to operate the machines with conventional hydrostatic control, eco mode for better fuel efficiency or like an automobile with foot pedal – which is especially useful on the road.

FOUR WHEEL STEER

Four wheel steer on both models ensures that the rear wheels stay on the path and includes slope compensation with back axle correction for better control on hills and headlands. Also, crab steer mode allows for enhanced mobility in tight places.
